SUMMARY

AI engineer who has built and shipped AI-powered automation for two companies, integrating intelligent agents, and task automation pipelines into production systems. Proficient in Python, Google ADK/LangGraph, prompt engineering, RAG, and model fine tuning.

EDUCATION

University of California, Santa Cruz

Santa Cruz, CA

B.S. in Computer Science; GPA: 3.6

Aug. 2022 – June 2026

- Relevant Coursework: Machine Learning, Data Structures & Algorithms, Distributed Systems, Database Systems, Software Engineering, Object-Oriented Programming

WORK EXPERIENCE

AI Engineer Intern

January 2026 – Present

Keysight Technologies

Remote

- Developed a Python MCP server exposing 45 tools across Keysight's KS8500B platform, allowing Keysight's entire test automation platform to be managed by an AI agent
- Replaced multi-step manual test workflows with a Google ADK agentic system that executes tests from natural language, cutting average test setup from 30+ minutes to under 5
- Designed a parametrized evaluation framework (pytest) measuring model accuracy, tool selection performance, and latency, achieving 93% accuracy across 30+ workflow scenarios.

Software Engineer Fellow (Contract)

September 2025 – December 2025

Movement Labs

Remote

- Deployed a Google ADK based agent on GCP Cloud Run integrated with a messaging platform, handling 500+ daily conversations with persistent session state.
- Created a 49-case automated test suite integrated into CI/CD pipelines to gate every deployment, catching 12+ regressions before production and ensuring system robustness.
- Consolidated 4 manual workflows into a single intelligent agent for campaign creation and SMS deployment, reducing setup time from 45 minutes to under 10.

Software Engineer Intern

June 2025 – September 2025

Beyond Computer LLC

Petaluma, CA

- Redesigned the company website end-to-end (React, Node.js) with responsive UI, delivering a user-centric product that increased monthly lead generation by 100%.
- Built REST API integrations with Datto RMM for automated device management, documenting findings and processes while saving 10+ hours/month on operations.

PROJECTS

Autonomous NOC Agent | *LangGraph, Prometheus, React*

March 2026

- Architected an intelligent agent that autonomously detects and remediates network incidents in under 15 seconds with zero human intervention.
- Built a full-stack application with a Python backend and React dashboard streaming real-time agent decisions via SSE, delivering live visibility into AI-driven diagnostic workflows.
- Integrated LLM APIs with LangGraph agentic orchestration to enable autonomous troubleshooting through a ReAct reasoning loop with multi-step task automation.

AI Email Response Assistant | *Python, Unsloth, LoRA, Gemma 4B*

June 2025

- Fine-tuned a 4B-parameter LLM with LoRA on 500+ email-response pairs to achieve consistent tone matching without external API dependencies.
- Built a local on-device inference pipeline optimizing for efficiency and latency while keeping sensitive correspondence fully on-device for data privacy.

TECHNICAL SKILLS

Languages: Python, C/C++, Java, TypeScript, JavaScript, SQL, Bash, HTML/CSS

AI/ML & Deep Learning: LangChain, LangGraph, Google ADK, PyTorch, LLM Fine-tuning (LoRA), RAG

Backend & APIs: FastAPI, Node.js, REST API Design & Integration, PostgreSQL (SQL), Pydantic

Frontend / Web: React, Next.js, TailwindCSS, Server-Sent Events (SSE)

Cloud, DevOps: GCP, Docker, Git, GitHub Actions, CI/CD, Prometheus
